- Volume control

### Accessories

- AC/DC adaptor: 2x 9V DC 200mA
- Batteries: 4 x AA baby unit not incl.
- User manual

### Power

- Battery voltage: 4.8 V
- Operating time on battery: 12 hr

## Product highlights

### Number of channels

A choice of channels significantly reduces the risk of interference or sounds from other baby monitors in the neighbourhood.

### Digital Pilot Tone

A special tone that is transmitted along with the audio signal minimises the chance of interference from other wireless appliances.

### Digital System check

A visible and audible warning is activated if the communication link between the baby unit and parent unit is unreliable.

### System check

When interference is detected in the communication link between the baby unit and parent unit or if the signal is too weak, the visual and audible alarms will be activated.

### System check alarm

The parent unit gives an audible alarm when it is outside the communication range of the baby unit or when the communication link is not reliable.

### System check light

Green light on the parent unit lights when the connection between the baby and the parent unit is reliable and flashes when the parent unit is outside the range of the baby unit or when the communication link is not reliable.

### Night light

A soft, glowing light is reassuring and provides a focal point in the dark.

### Talk back to comfort baby

Not every situation means you have to go to your baby. The talk back feature from parent unit to baby unit lets you comfort your baby with the soothing tones of your voice.

### Charging base

Thanks to the built in battery charger in the base, you get extra freedom (when fully charged) to take the parent unit with you around the home and stay in touch with your baby. It's also a convenient place to store the parent unit, and ensure it's always ready for use.

### Volume control

A handy rotary control sets the volume to the ideal level to suit your preference.

### Sound level lights

Sometimes it's a great help to 'see' when your baby makes a sound. This row of lights provide you with a clear visual indication.

### Adjust microphone sensitivity

Possibility to set the sensitivity of the microphone so you only hear the sounds you want to hear.

### Rechargeable parent unit

Putting the parent unit on the charging base will automatically start recharging of the batteries, so it's always ready for portable use.

### Use in & around the house

Rest assured that as you take the parent unit with you as you move in and around your house, the parent unit will stay in touch with the baby unit. It keeps you reassuringly informed and able to respond quickly when baby calls.
